FIREWALL ASSESSMENT SERVICE

SPHERICA

The Firewall Assessment Service minimises risk by evaluating your security infrastructure's ability to detect sophisticated attacks and handle increased traffic from cloud storage, data analytics and web usage. It provides a health check for your network security and offers insights into your firewall infrastructure.

Our Firewall Assessment Service will help with the following:

- Provide external expertise and advice
- Identify firewalls that are reaching EOL
- Assist with achieving cyber certifications
- Reduce risk of external cyber threats
- Assist with achieving cyber certifications

THE FIREWALL ASSESSMENT SERVICE WILL INCLUDE:

- Firewall architecture review
- Identification of security and resilience gaps
- Performance evaluation
- Malware/botnets detection
- Application vulnerabilities
- Threat detection and gaps in security protection
- Review of documentation and diagrams
- Review of firewall hardware to ensure all models are within vendor support

Our Firewall Assessment Service will strengthen security, enhance user productivity and optimise performance by identifying actionable intelligence into your current security posture.

After gathering information with minimum disruption to your business, our experts will produce a comprehensive Health Check Assessment Report, providing a detailed analysis and a no obligation report outlining our findings.

BENEFITS

Network and Firewall security assessment
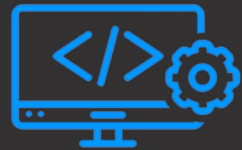

Firewall topology and configuration review

Performance evaluation and refresh planning

Highlight potential security issues and threats

Highlight any high utilisation and EOL devices

Highlight devices that are not running the latest software release

WHAT'S NEEDED?

1 x ENGINEER
We will need one of your engineers to help us deploy the assessment and monitoring of your firewalls.

2 x ENGAGEMENTS
Remote access your network on 2 occasions to study the services and capture all the information we need to report back.

4 x STEPS
There will be 4 steps. An initial kick off call, two cadence calls and a final report overview.
