

In short, a Network assessment reduces risk. The Network is the life blood for any company and vital to its ability to operate but often the health of it is overlooked, many organisations don't have network specialists, networks grow over time in an unplanned way, staff changes happen, and documentation can be out of date. As a result, any changes to the network are a significant burden, high risk and complex. The assessment service will provide a health check for your network and give you a clear picture of the topology.

- Lack of inhouse Network specialists
- Network bottlenecks
- Lack of documentation or updates forgotten
- Network risks
- Optimisation and efficiency issues
- Connectivity of devices
- Risk avoidance to your business

Contact Spherica today to resolve these issues with our Network Assessment Service.

### THE SPHERICA NETWORK ASSESSMENT SERVICE WILL INCLUDE:

- Network architecture review
- Identification of security and resilience gaps
- Performance evaluation
- Network traffic and performance evaluation
- Routing tables reviewed
- Investigation of live network telemetry for device health, protocol stability and errors
- Review of documentation and diagrams
- Review of network hardware to ensure all models are within vendor support

Spherica is a new breed of IT Managed Service Provider. By putting automation at the heart of our day-to-day operations, we deliver lightning fast, super-efficient and highly cost-effective IT services. The very definition of what any progressive business needs to gain a competitive advantage in the modern digital economy. Spherica will apply the same Automated strategy when performing the Network Assessment Service.

By leveraging our Network technologies, utilising LogicMonitor as well as the decades of experience of our engineers in the Network infrastructure, NAS is designed to provide perspective of your network in an effort to reduce risks, bottlenecks, increase optimisation, improve resilience and make recommendations according to industry best practice. The NAS has been designed to be a light touch engagement that runs for a fixed period of time and results in real world, actionable intelligence specific to your environment that will help improve and validate your current network and increase performance. Spherica will drive through network optimisation by implementing recommendations in our report.

## BENEFITS

 Network security assessment	 Performance evaluation	 Review network traffic	 Highlight any high utilisation
 Network topology & configuration review	 Network inventory	 Highlight potential network bottlenecks	 Highlight devices not running latest software

## WHAT'S NEEDED?

### 1x ENGINEER

We will need one of your engineers to help us deploy LogicMonitor for the assessment and monitoring of your network.

### 3x ENGAGEMENTS

We will monitor the data captured by LogicMonitor on 3 occasions to study the services and capture all the information we need to make an informed decision ready for reporting back to you, our findings.

### 5x STEPS

There will be 5 steps. An initial kick off call, three cadence calls and a final report overview.

## RISK REPORT

 How to remove bottlenecks	 Topology diagram of network & devices	 Full security and risk assessment report	 Produce action plan to resolve identified issues
 Actions to increase efficiency & optimisation	 Recommend changes to documentation	 Present findings of underutilised services	 Cost estimate for Spherica to Project Manage the resolution
